

A private glass, a public death

CASE: MERIDIAN / OCT 30, 2026 / F1

Certified findings

Grant Larceny died after his private toast at 6:49. Botanical cardiac toxin was wiped inside his silver coupe before the cordial was poured. The glass tested clean when unwrapped at 6:40; food, decanter and pour tested clean. The service dome closed at 6:44, its seal remained intact until the witnessed 6:46 pour, and the glass was then watched through the toast. Contamination therefore occurred between 6:40 and 6:44. The missing conservation reference sample contains the same compound. One attending guest acted alone.
