

# The glass, not the punch

**Grant's glass / inside**  
**CYANIDE DETECTED**

**Shared punch pitcher**  
**NO CYANIDE DETECTED**

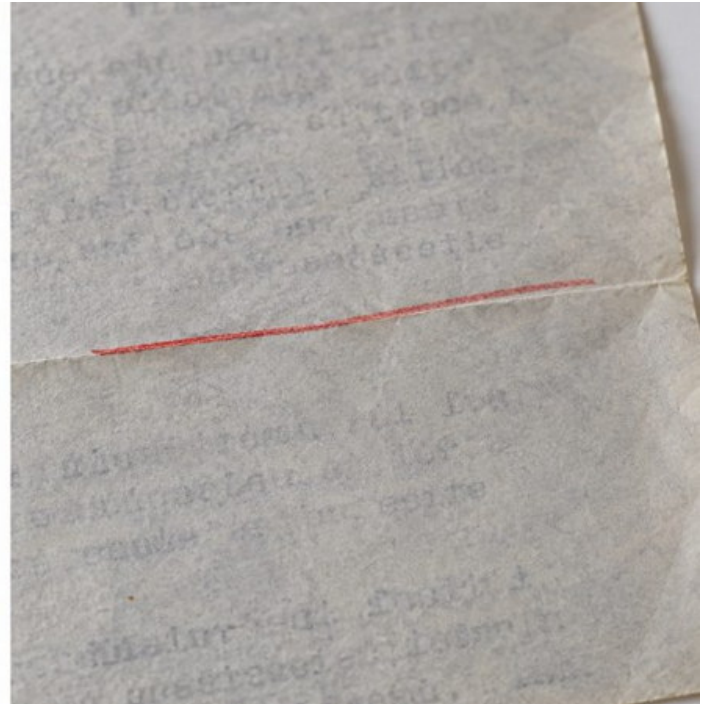

**Food samples**  
**NO CYANIDE DETECTED**

**Acquired poison bottle**  
**MIXTURE MATCHES GLASS RESIDUE**

Cyanide was found on the inside of Grant's glass. Samples of the shared punch and food were clear. Material remaining in the acquired poison bottle matches the residue in the glass. The lab result identifies the poisoned object; the caterer's record establishes how it was handled.

## Two details from the museum's records

**Blue protective wrapping**

Logo sticker across a closed seam

**Blue cloth placemat**

Logo embroidered into fabric

**Raised RECEIVED stamp**

First used at 6:45

---

The museum-logo sticker bridged the sealed plastic wrapping. The placemat's logo was sewn into cloth. They are different objects. The receiving desk first used its raised RECEIVED stamp at 6:45. Earlier working copies had flat red-pencil corrections, not that stamp.
