

A private glass, a public death

CASE: MERIDIAN / 30 OCT 2026 / F1

Certified findings

Grant Larceny died after drinking his private toast at 6:49. A botanical cardiac toxin is present in his silver coupe. The communal food and cordial decanter test clean. The reference sample missing from conservation contains the same compound. The empty coupe was delivered at 6:40; cordial was first poured at 6:46. One guest acted alone. These findings identify the contaminated vessel, not the guest who contaminated it.
